

Ndumia Victor Wanyeki

10105, Nyeri, Kenya +254795143782 | wanyekivick419@gmail.com

Professional Summary

Detail-oriented and analytical student with a passion for data analysis and problem-solving. Skilled

in extracting insights from complex datasets using tools like Python and SQL. Seeking an attachment to apply and enhance my analytical skills while contributing to data-driven decision-making processes.

Committed to writing clean and maintainable code while following industry best practice.

Experience

INTERN | August 2023 – January - 2024

The Jitu - Nyeri, Central Kenya

The Jitu is a forward-thinking software development startup specializing in creating high-performance, scalable applications using modern software engineering practices

- Collaborated with a team to analyze and visualize large datasets, providing actionable insights for business decision-making.
- Cleaned, transformed, and analyzed data using Python and Excel to improve data accuracy by 20%.
- Prepared detailed reports and dashboards using Power BI, streamlining project monitoring processes.

FREELANCE DATA ANALYST | August 2023 – December 2023

Upwork - Kenya

- Provided data analysis and visualization services for clients across various industries, achieving a 100% satisfaction rate.
- Conducted exploratory data analysis (EDA) to identify trends and patterns, supporting clients in strategic planning.
- Delivered automation scripts in Python, saving clients an average of 10 hours of manual work per project.

INTERN | February 2025 - April 2025

Nyeri Outspan Hospital

Key Responsibilities and Accomplishments:

- **Hardware Maintenance:** Performed routine and preventative maintenance, diagnosing minor issues and ensuring optimal operational status of assigned equipment.
- **Peripheral Management:** Managed printing peripherals, including replacing paper rolls/toner and configuring/troubleshooting network and local printers for seamless system integration.
- **Professional Development:** Enhanced professional social skills and expanded network through interaction with colleagues and end-users, improving communication and collaboration for technical support.
- **Technical Skill Augmentation:** Significantly advanced practical hardware knowledge, gaining hands-on experience with internal components and diagnostic tools, increasing troubleshooting and repair efficiency.
- **Workspace Setup:** Efficiently set up ergonomic desktop workspaces for new/existing employees, including physical installation of computing units and peripherals, and necessary cable management for a clean, productive area.

Education

Bachelor of science in Computer Science

DEDAN KIMATHI UNIVERSITY OF TECHNOLOGY (DeKUT) • 01/2022 - Present

High School Diploma

Meru School • Meru, Kenya • 01/2018 -

04/2022 Grade: A-

Projects

Breast Cancer Classification Model

Built a model to classify breast cancer cases as malignant or benign using patient data.

Applied machine learning techniques to achieve reliable predictions and presented findings clearly.

Tools: Sci-kit Learn, Pandas and Keras API.

Hospital Management System

Created a system to manage patient records, appointments, and staff details.

Simplified hospital operations by integrating a user-friendly interface and a secure database.

Tools used: Django for back-end, React for the front-end and PostgreS for the Database.

Comikaze

Developed a fully functional web application for manga enthusiasts, built with a **React** frontend for a dynamic, responsive UI and a **Django** backend for secure, scalable data management. Key features include seamless online manga reading, an optimized viewing experience, intuitive content discovery, search functionality, and a dedicated reader mode. The React/Django stack ensures high performance and maintainability.

AgroTrack

This mobile application is a digital farm assistant that utilizes advanced agricultural technology to streamline operations.

The **Task Management Module** allows farmers to log and track all farm tasks (planting, irrigation, etc.), including location, resources, and personnel. It provides intelligent, automated alerts for scheduled activities to optimize resource use and maximize yield, generating reports on efficiency, costs, and labor for data-driven decisions.

The **Computer Vision Disease Detection Module** uses a cutting-edge deep learning model. Farmers capture symptomatic plant images for instant, AI-powered diagnosis of diseases or pests. The app provides immediate, actionable treatment (organic/chemical) and preventive recommendations, enabling early intervention to minimize crop loss and reduce incorrect pesticide use.

Skills & Abilities

- Analytical Skills
- Bootstrap (Framework)
- Computer Science,
- C (Programming Language)
- Machine Learning,
- Mathematics,
- MySQL,
- Python (Programming Language),
- React.js,
- Web Design

Activities and Interests

CyberSecurity Analyst, Machine Learning, Mobile Development
